

查看ssr服务端密码：

```
1 cat /etc/shadowsocks.json
```

修改ssr服务端的配置文件（密码、端口等）

```
1 vi /etc/shadowsocks.json
```

```
[root@izj6cios3psx4hs71evortz admin]# cat /etc/shadowsocks.json
{
  "server": "0.0.0.0",
  "server_ipv6": ":::",
  "server_port": 77,
  "local_address": "127.0.0.1",
  "local_port": 1081,
  "password": "StartWang2019",
  "timeout": 120,
  "udp_timeout": 60,
  "method": "aes-256-cfb",
  "protocol": "auth_sha1_v4_compatible",
  "protocol_param": "",
  "obfs": "http_simple_compatible",
  "obfs_param": "",
  "dns_ipv6": false,
  "connect_verbose_info": 1,
  "redirect": "",
  "fast_open": false,
  "workers": 1
}
```

修改完一定要重启shadowsocks的服务

```
1 service shadowsocks restart
```

顺便附上服务的集中操作方法：

```
1 service shadowsocks start      //启动服务
2 service shadowsocks stop      //停止服务
3 service shadowsocks restart    //重启服务
4 service shadowsocks status     //查看服务的状态
```
